Application programming interface (API) In the case of the object-oriented and C++-based ObjectARX programming API, users can write scripts to customize, automate or create objects that add value to the application, tools, and workspaces of the program. ObjectARX tools, controls and scripts can be written in any ObjectARX-supported language, including Visual LISP, Visual C++, Visual Basic, JavaScript, Java and others. ObjectARX allows controlling and customizing objects with objects. APIs support automation of processes and functions in AutoCAD Torrent Download. AutoLISP provides the foundation for users to perform string manipulation and arithmetic, process large and small files, check results and much more. API scripts are saved in an AutoCAD workspace, and are updated when changes occur, such as when a new drawing is opened. APIs can be extended with custom scripts written in Visual LISP, Visual Basic, C++, Java, Python, JavaScript, Pascal, or other languages.

AutoCAD's ActiveX Data Objects (ADO) and Direct Data Objects (DDO) allow users to query and write to databases and files using the familiar ActiveX controls of Microsoft Internet Explorer. Scripts AutoCAD can be scripted in a number of programming languages, such as Visual Basic, C++, Visual LISP, Visual C#, JavaScript, Java, and others.
